

# Phishing Email Analysis Report

**Date:** 22 October 2025

**Author:** Your Name

**Objective:** This report presents an automated analysis of email URLs using Python, VirusTotal, and urlscan.io. The goal is to detect, classify, and understand phishing techniques, demonstrating a practical understanding of social engineering detection.

## Top Phishing URL Findings

**Summary & Recommendations:**

- Most phishing attempts used credential harvesting and urgency tactics.
- Common red flags included fake login forms and shortened URLs.
- Recommend implementing SPF/DKIM/DMARC, blocking suspicious domains, and user awareness training.
- Use sandbox tools (urlscan.io) and VirusTotal APIs for triage before opening unknown URLs.
